Project Milestone (Sprint 2): Ethical Considerations & Front-end Design

TEAM 22

Oct 19, 2021

Part A

What are some ethical considerations of your product?

How will we fund the product?

Will we charge users or will we sell their data?

How much will we defend the user's data in the case of a data request?

How much moderation will the admin provide over user content?

Address any features in your product that could be misused and how you plan to guard against misuse. *For example, if you plan to allow images to be uploaded by users, will you include a way for other users to report inappropriate images or use some other strategy?*

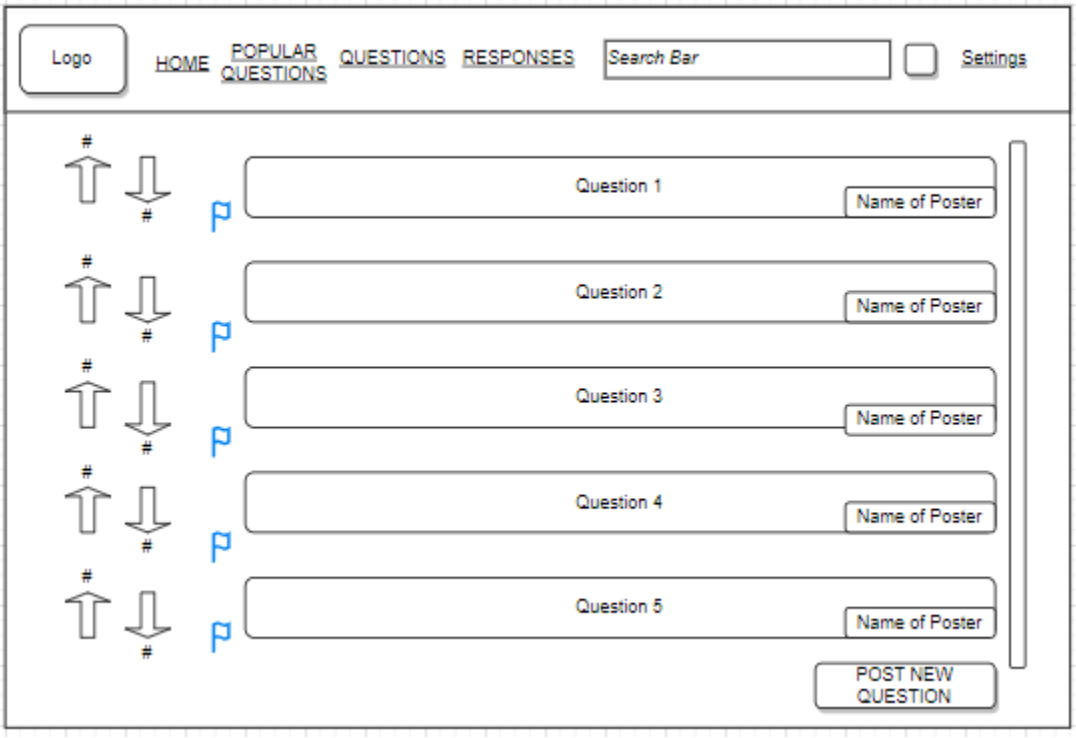
- **Attach Images to a post**- create system for users to report inappropriate images/ system for posters to tag their image as graphic and add extra setting for everyone to chose to have graphic images hidden or visible by default
- **Create/edit question or post**- create filter preventing inappropriate words from being used in posts
- **Register a user**- include a verification process when a user registers a new account to prevent creating false accounts
- **Ability upvote and downvote questions and answers**- create a system for preventing invalid upvotes and downvotes. For example a group attacking a user.
- **Reporting a user for attack -** create a system to report users that are responding, attacking, or spreading malicious intent.

Part B

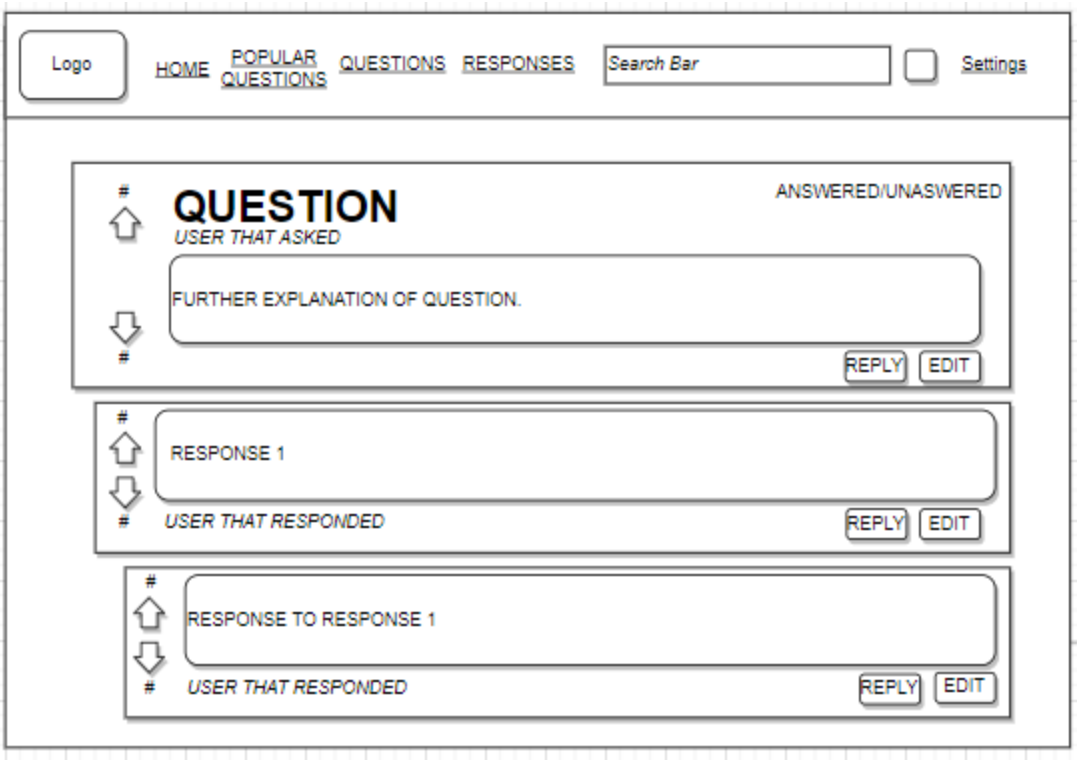
Design Lo-Fi Wireframes of:

- *The main app homepage:*

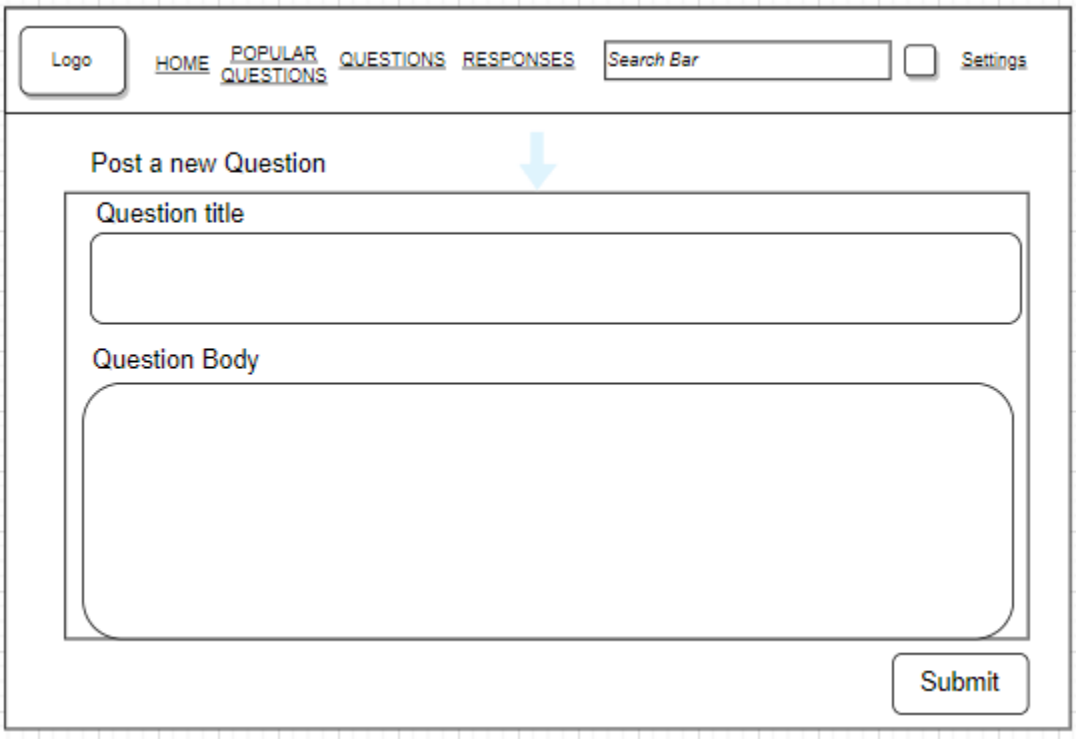
- *Viewing a list of questions/posts stored in your database:*



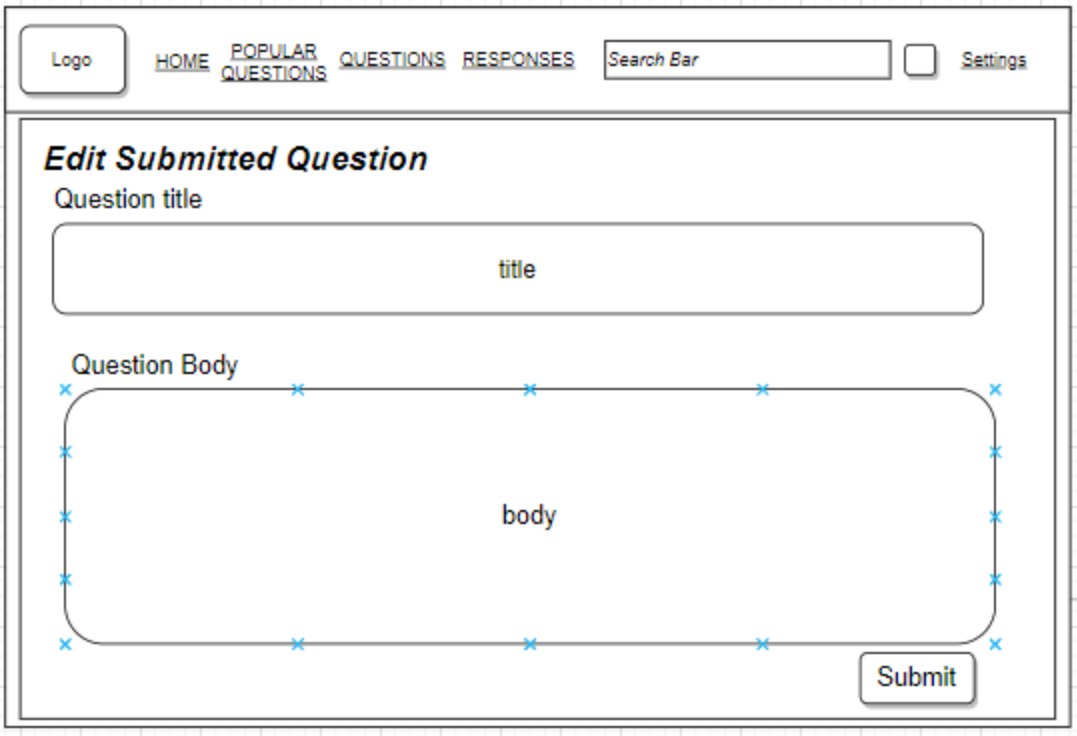
- *Viewing a question/post and its details*



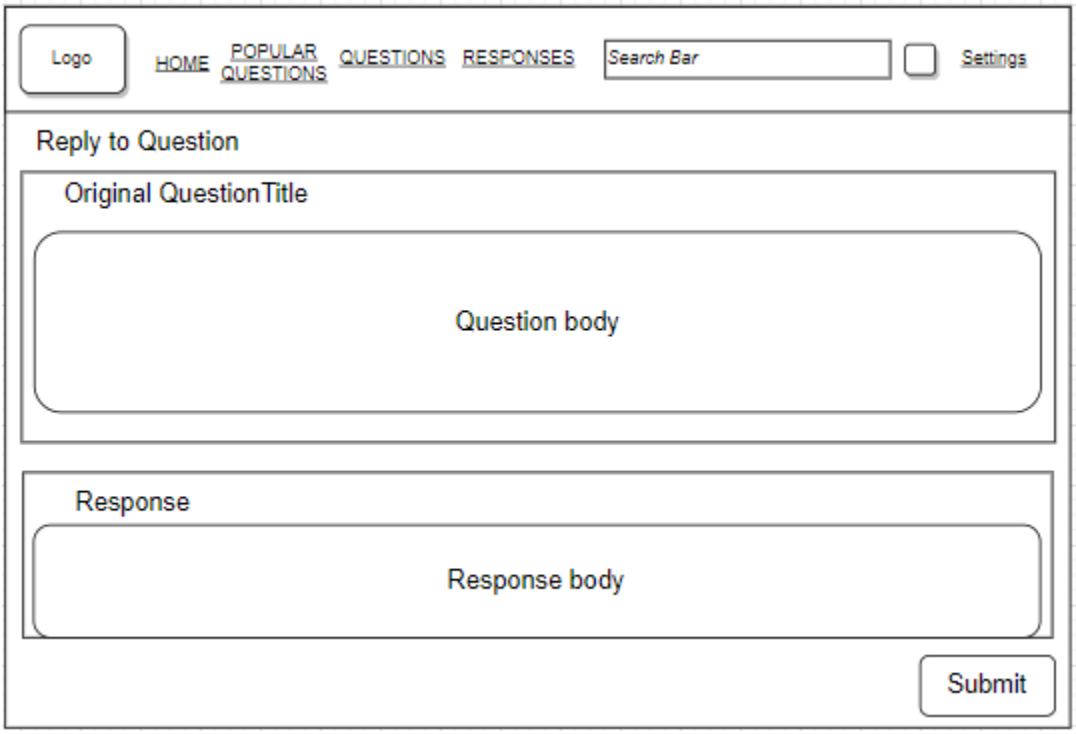
- *Entering data for an question/post*



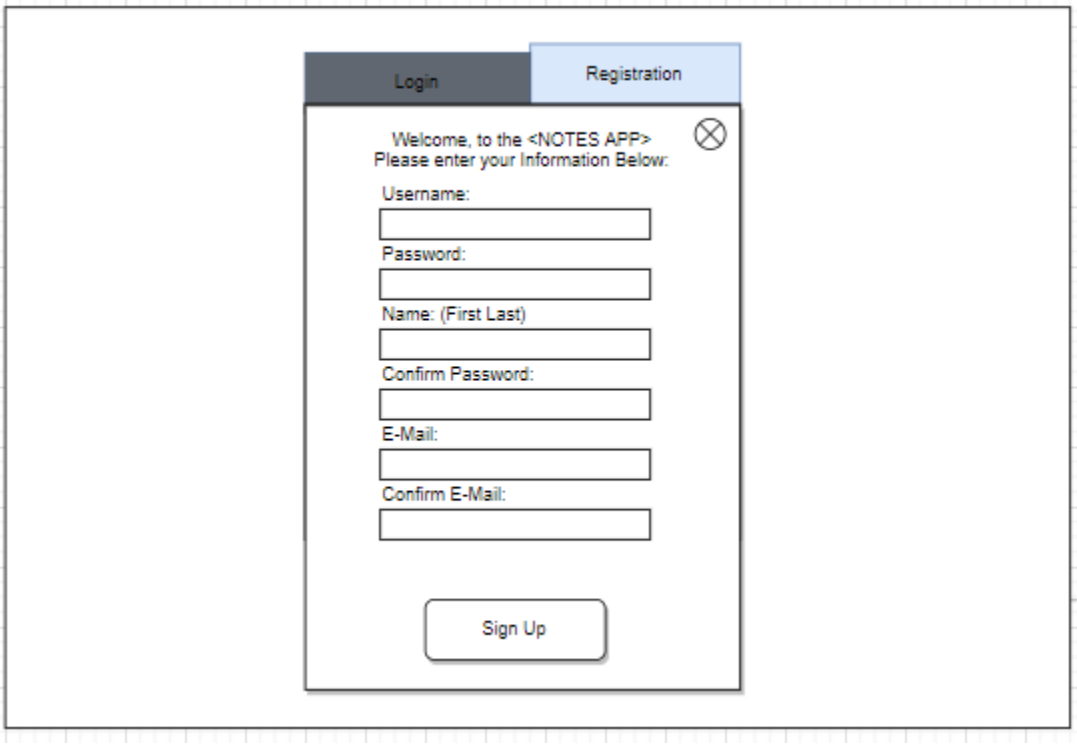
- *Editing data for a question/post*



- *Replying to a question/post*



- *User registration*



- *User sign in (login)*
